

This letter is to inform you of the status of Lawsonia intracellularis in Barrier 3.

Since the latest update May 23, regular samples of blood and feces have been examined. A few blood samples still show a positive result by the ELISA-method, but the tendency is declining. Only 1 fecal sample has been tested positive by the PCR-method.

There are no clinical signs in the minipigs in Barrier 3 which could be related to the findings.

The status of Lawsonia intracellularis will currently be monitored in Barrier 3 and new findings will be communicated to you.

For any comments on the status of Lawsonia intracellularis, please contact
Ellegaard: veterinary@minipigs.dk

Sincerely,

Ellegaard Göttingen Minipigs A/S
Head of Veterinary Services
